# Personalise your productivity

Each workplace, and each employee, has a particular way of working. ClearDesk's solutions allow for this with a simple, single-view, flexible desktop configuration. With a single sign-on, you're able to access data from each of your apps where and when you need it, and reduce time lost logging in and out of separate apps looking for information.

## Microsoft 365 at our core

Microsoft 365 opens a world of opportunity for all of us. We make that world your oyster.

The average worker uses 8 applications to do their work. Studies show they lose 30 minutes a day simply signing in and out of them!

- > We make your desktop a single window into all your Microsoft 365 applications.
- > One single sign-on to access them all.
- > Securely and seamlessly, across devices.

With multi-factor authentication to keep data safe, we ensure the right people get the right information when they need it. Every time.

## Make working apart come together.

Connect your people simply and securely, no matter where they work.

With staff working from home, security can be a concern. ClearDesk overcomes this in a number of ways. multi-factor authentication ensures only the authorised user accesses apps, while all data is secured in transit, in the cloud and at rest. Data sovereignty is strictly adhered to, with data staying domestic to country of user, and all data is backed up in the cloud at all times.

# The benefits are clear

Working smarter as a business and as individuals has never been easier thanks to ClearDesk.  
With an easy set up, you and your team...

## Real time stats and analytics

ClearDesk allows a user to build and/or modify reports in real time. Management can create reports for staff to utilise quickly and easily.

## Security and single sign-on

Your data is secured with one password, protected by multi-factor authentication and single sign-on. Access to your apps is just a click away, allowing you and your staff to spend more time getting the job done.

## Boost Productivity

ClearDesk saves your team time in many ways. Having one single sign-on means there is no down time switching between apps. Having everything in one clear view means no more time spend searching. Easy Reporting also leaves time better spent for other tasks

## Better business intelligence

Buried behind ClearDesk's simple elegance is a powerful engine that allows you to gain invaluable business intelligence and drive automated reporting for both the individual and your company's performance.

## Make remote working work

If you're looking for a work-from-home solution for your workforce, we don't have the answer.... we ARE the answer. No passwords left on home computers, no difficult navigation, safe in the knowledge that your data and staff are protected.

## Complete dashboard view

Yes, we are all busy. Yes, we want things to be easier. But has it really come to judging how easy something is by how many 'clicks away' it is? Well, yeah – it sorta has. ClearDesk provides customisable dashboards for any piece of data buried in your applications

## No VPN Needed

- > VPNs require users to network into your infrastructure, only to go out again. With ClearDesk they go direct to the cloud.
- > No IT overhead
- > No network constraints
- > No extra support

# Pick the ClearDesk package that suits you.

SaaS applications are incredibly complex and getting larger. Users often only access a couple of data points at a time, but log in and out of applications many times a day to access the same small set of data.

They then blend that data with single outputs from other applications. Jumping between applications and combining what they find in spreadsheets. No more!

With ClearDesk you can choose the package to suit you, allowing you to use your data as much or as little as you need. You can choose from the following three options and scale up or down as needed:

## ClearDesk Core

Core is the entry point for everything ClearDesk.

Core greets you each morning for your single sign-on, houses all of your applications, makes navigation easy, displays your sharepoint files, brings together your news and social media feeds and even has room for a digital family photo.

Best of all, your ClearDesk Core fits with the way you want your work screen to look. It is fully customizable by drop-click.

## ClearDesk Fuse

Fuse is our way of saying that ClearDesk makes your applications talk to each other. There used to be cut and paste, there used to be merge tools, there even used to be poor souls whose job it was to enter data from one application to another. This is no more. ClearDesk Fuse takes the information you need from one application and seamlessly adds it to another application in one click.

Starting a new customer file in Salesforce, one click and it replicates into Xero. That customer changes address, no problem change it once and its fused across all of your apps.

## ClearDesk Insight

Now that you have your customised screen set up just and all of your apps are talking to each other – ClearDesk gets serious with it's Flex option. Using the data that is fused from your applications, you can add it to your Company's Platinum Record and start delivering you reports and dashboards.

Create customised reports from anythings from sales and productivity through to inventory and analysis saving you and your team time to become even more productive.

With Flex you have all the control and options you need to make important decision allowing you to make your company more profitable

## Make ClearDesk work for you

Discover all the benefits ClearDesk can bring to your business.

**CALL NOW** – our people are ready to discuss your needs. One 15-minute call is all it takes to determine your best option, now and into the future.
